

IMPORTANT SAFETY INFORMATION

If you smell gas in your house, camper, RV, workplace or around any gas equipment...

1. Put out smoking materials and other open flames.
2. **Do Not:**
 - Operate electric switches
 - Light Matches
 - Use your phone

Any spark in the area where propane gas is present may ignite the gas. This could include the spark in the light switch, telephone, appliance motor, and even static electricity from walking across a room.

3. Get everyone out of the building, vehicle, trailer or area.
Do that IMMEDIATELY.
4. Close all gas tank or cylinder supply valves.
5. Use your neighbor's phone and call a trained LP Gas service person and the fire department. Even though you may not continue to smell gas, do not turn on the gas again. **Do not re-enter the building, vehicle, trailer, or area.**
6. Have properly trained LP Gas service people repair the leak, and check and re-light all of your gas appliances for you.

No Odor Detected - "ODOR FADE"

Under some of the following conditions, you may not smell a gas leak. . . so we recommend you install a propane gas detector(s) in accordance with manufacturer's instructions.

- Some people (especially the elderly) are unable to detect the smell of gas.
- Colds, allergies, sinus congestion, and the use of tobacco, alcohol, or drugs, may diminish your sense of smell.
- Cooking odors or other strong odors can cover-up the smell of gas.
- On rare occasions, propane gas may lose its distinctive odor -- this is called "odor fade." Air, water, and rust in a propane tank or cylinder may weaken the gas odor, especially if the valves were left open after the container has been emptied.
- Sometimes propane gas loses its odor if a leak occurs underground.
